

CONTENTS

Introduction

CH1.	InkCor: The search for the silver bullet	9
CH2.	Iron gall ink corrosion treatment: Remarks from the museum point of view	12
CH3.	Damage survey of archives containing iron gall inks	20

Materials

CH4.	Iron gall inks in history: Ingredients and production	25
CH5.	Development of a model rag paper: A new tool in paper conservation research	69

Characterisation

CH6.	Methodology and analytical techniques in studies of iron gall ink and its corrosion	95
CH7.	Chemical analysis of metals in paper and ink	119
CH8.	Transition metals in historical documents determined by in-air PIXE	141
CH9.	The development of in-situ methods for identification of iron gall inks	147

Degradation and stabilisation

CH10.	Model studies of the catalytic role of transition metals	173
CH11.	Ageing and stabilisation of paper containing iron gall ink	181

Prototype InkCor treatments

CH12.	Designing non-aqueous treatments to counteract ink corrosion	195
CH13.	Non-aqueous prototype treatment agents for ink-corroded papers: evaluation of undesirable side effects	215
CH14.	Prototype InkCor treatments: evaluation of effectiveness	247
